

Maple Syrup FAQs

How much sap does it take to make 1 gallon of syrup? It takes about 50 gallons of sap to make a gallon of syrup.

Does it hurt the tree to tap it? After the sugaring season, the maples heal themselves by closing the hole with additional bark and scar tissue.

How old should a tree be before you tap it? A sugar maple should be about 30 years old before you tap it. Otherwise, you might harm the tree.

How much sap can one tap yield? Generally 1 taphole only yields about 10 gallons of sap. Large Sugar Maples can support 2 tapholes or more per tree.
